

Pro-Tracking

Improve quality of care, regulatory compliance, and reimbursement processes while decreasing unnecessary risk with real-time MDS verification.

Available only in the United States.

Stan Oden
PointClickCare Customer

PointClickCare Pro-Tracking is a fully integrated, cloud-based analytics tool that supports seamless, real-time feedback on potential data integrity issues prior to submission to the Centers for Medicare and Medicaid (CMS).

As regulations for senior care become increasingly complex and stringent, many senior care providers are finding their efforts to remain compliant overwhelming. Providers know it's important to keep pace with the ever-changing regulatory environment. Pro-Tracking allows staff to make swift, informed decisions with

confidence, and is designed to help providers remain in compliance with CMS regulations. They can bridge the gap amongst interdisciplinary teams with the detailed MDS verification feedback, as well as an extensive library of reports and graphs.

Pro-Tracking provides:

- Automated verification of MDS assessments
- Improved decision making with real-time data
- Proactive identification of coding discrepancies
- Timely, actionable reports and charts

What is Pro-Tracking?

Pro-Tracking is a cloud-based analytics tool that gives providers real-time MDS verification and quality improvement data at any point in the assessment cycle. It offers sophisticated coding inconsistency checking, quality measurement, quality management and corporate management tools. Using Pro-Tracking, providers gain improved interdisciplinary planning, enhanced quality of care, and a more accurate RUG score. In addition, Pro-Tracking offers an array of reports with real-time data and trending, enabling staff to perform the analysis necessary to make well-informed decisions while efficiently addressing interdisciplinary and operational issues.

How does Pro-Tracking work?

Integrated into the PointClickCare platform, right into every MDS, Pro-Tracking provides instant feedback on potential data integrity issues, enabling staff to easily identify and address data coding inconsistencies prior to submission to CMS with minimal impact to clinical staff's time. Leveraging an extensive library of real-time reports, Pro-Tracking also provides clinical staff feedback to proactively improve resident care and address risk management implications before they result in a problem. By providing cross-references between sections of the MDS, collaborative interdisciplinary care plan decision-making is encouraged, and a culture of continual learning is enabled.

How do providers benefit?

Improved Regulatory Compliance – Enhance documentation accuracy and regulatory compliance with embedded feedback recommendations into MDS assessments.

Improved Quality of Care – Make proactive changes with up-to-date standard of care reports, trends and outliers using real-time data to enable staff to identify charting errors and recurring issues.

Reduced Time Constraints on Clinical Staff – Eliminate the need for manual paper-based audit tools with extensive automated verification checks, and enable clinical staff to focus on providing care.
