Solution Sheet

Companion for Senior Living

Simplified Service and Medication Delivery

PointClickCare Companion is an intuitive mobile app for iOS and Android that streamlines the workflow for service delivery and documentation. Companion empowers caregivers with a fast and easy-to-use mobile tool that unifies the workflow for the delivery and documentation of services and medication.

Deliver and Document Tasks with Efficiency and Impact

The complexity and scope of tasks assigned to universal caregivers in senior living communities continues to increase. There is no quick way to get an overview of their schedule so that they know what to tackle next on a long list of tasks. Too often they're left without access to resident information that would help them make the best decisions for each resident's care, and documentation is pieced together at the end of a shift.

PointClickCare Companion empowers caregivers with an intuitive mobile app that helps them manage their day and have more time to care for residents. The app delivers an easy-to-follow workflow to access their task schedules by priority and then quickly document tasks at the point of care.

Improve Operational Efficiency

Wellness team members can log in once and go. Upcoming tasks needing attention are prioritized and logically combined for easy, efficient completion. Color coding helps to easily see what is complete, pending, and overdue.

Resident Focused Care

With Companion, wellness team members can spend more quality time with residents and less time documenting, providing wellness team members the information they need to deliver a person-centered experience.

Support Financial Health

Companion enables your wellness team to easily capture and bill both scheduled and unscheduled services, seamlessly sharing billing information for accurate invoicing of all revenue opportunities.

Companion helps:

Empower staff with immediate access to tasks, schedules, and resident information

Guide caregivers so they can complete tasks accurately, efficiently, and on schedule

Eliminate copycat charting and save hours of staff time spent on post round care documentation

Improve communications and create alerts to inform staff

Facilitate combined ADL-medication management care rounds

Mitigate risk during medication management by simplifying procedures

One App to Manage All Tasks

Staff are empowered with easy-to-use tools in a single mobile app that helps them manage their day. All tasks are organized in chronological order by time and status, so caregivers know what is needed and when.

ADLs and meds are combined into one unified toolset with tasks grouped by resident and type with clear status indication (overdue, due now, due later). Caregivers have access to everything they need in one place, and an easy guide of what to do next.

Keep staff up to date with what is going on in the facility without going back to a desktop.

Easily Capture and Bill Scheduled and Unscheduled Services

Capture all services at the time of delivery to yield solid supporting information.

Companion helps caregivers identify, capture, deliver, and bill for ancillary services. Communities can justify additional service billings and value delivered with accurate and detailed documentation for scheduled and unscheduled tasks.

Spend More Quality Time with Residents

Running on any Apple iOS devices or Google Android devices, Companion guides caregivers to complete a full range of tasks accurately, efficiently, and on schedule, increasing resident satisfaction with the service they are receiving.

Documentation of ADLs can be completed in 30-seconds or less for services rendered at the point of care. Now caregivers can spend more time interacting with residents and less time documenting tasks.
