PointClickCare®

Solution Sheet

Practitioner Engagement

Enhance collaboration with care teams by utilizing our practitioner-focused, dedicated workspace and app that streamlines documentation and facilitates on-the-go order management.

Practitioner Engagement is a dedicated workspace and app designed to streamline documentation and manage orders on the go, fostering better coordination and collaboration with care teams.

Created to empower practitioners with enhanced productivity and collaboration, improving care decisions and delivery.

Practitioner Engagement provides convenient access for practitioners to view charts, document progress notes, view and bulk sign orders, and e-prescribe for residents in their care.

Truly Connected Care, Anywhere

The number of seniors requiring long-term care, together with the associated costs, will grow significantly over the coming decades. For senior care practitioners, this means higher caseloads while having to deal with outdated workflows and a lack of timely access to patient information.

PointClickCare is reshaping and improving the way coordinated senior care is delivered with innovative mobile technologies and cloud-based software platforms that deliver the right information and workflows at the right time, while maintaining a high level of care and compliance.

Benefits of PointClickCare's Practitioner Engagement

Enhanced Efficiency

Streamlining the documentation experience with web and mobile access to resident information helps accelerate care team productivity.

Improved Care Outcomes

Enable high performance and confident decision making with live collaboration and accelerated care coordination.

Minimized Risk

Reduce the risk of delayed treatment and medication errors with improved care coordination and ePrescribing safeguards.

Leverage PointClickCare's Practitioner Engagement to improve:

Resident Charts and Encounter Documentation

Use eINTERACT™ to access resident charts across all facilities within an organization, including information such as diagnoses, code status, allergies, current orders details, and progress notes. View a resident's progress notes and conveniently add an encounter documentation directly into the resident's chart from your mobile device.

Medication Orders and ePrescribing

Improve the medication management process and eliminate inefficient work-flows by using our HIPAA-compliant mobile app to create, review, modify and electronically bulk sign orders on the go. Use One Sign, available at the individual resident level, or Global Sign, where a practitioner can review and sign all orders for all residents in their care.

EHR Integration and Interoperability

Achieve truly connected care by leveraging full mobile access into a facility's EHR (electronic health record), a feature only available with PointClickCare. Access both real-time and clinical-rich data for enhanced interoperability, improving collaboration and coordination across the full continuum of care.
