Companion for Skilled Nursing

Prioritized Tasks and Faster Documentation in Your Hand

PointClickCare Companion is an intuitive mobile app for iOS and Android that unifies the caregiver's workflow to help them manage their day by capturing consistent, accurate, timely, and complete documentation at the point of care, enabling them to spend more quality time with residents.

Deliver and Document Tasks with Efficiency and Impact

The complexity and scope of tasks assigned to caregivers in skilled nursing facilities continues to increase. There is no quick way for care staff to get an overview of their schedule, meaning they can't prioritize their long list of tasks. Too often documentation is hastily cobbled together at the end of a shift or staff are left without access to resident information that would help them make the best decisions for each resident's care.

PointClickCare Companion empowers caregivers with an intuitive mobile app that helps them manage their day and have more time to care for residents. The app delivers an easy-to-follow workflow to access their task schedules by priority and then quickly document tasks at the point of care.

Improve Operational Efficiency

Care staff can log in once and go. Upcoming tasks needing attention are prioritized and logically combined for easy, efficient completion. Color coding helps to easily see what is complete, pending, and overdue.

Resident Focused Care

With Companion, the care team can spend more quality time with residents and less time documenting, giving team members the information they need to provide a person-centered experience.

Faster Training

The intuitive mobile app has easy-to-follow workflows for faster onboarding of new staff, enabling them to care for residents sooner.

Companion can help you:

Empower staff with immediate access to tasks, schedules, and resident information

Guide caregivers so they complete tasks accurately, efficiently, and on schedule

Save hours of staff time documenting tasks during and after their shift

Eliminate copycat charting and post-round care documentation

Improve communications and create alerts

One App to Manage All Tasks

Staff are empowered with easy-to-use tools in a single mobile app that helps them manage their day. All tasks are organized in chronological order by time and status, so caregivers know what is needed and when.

With the Companion mobile app, caregivers have access to everything they need in one place, and an easy guide of what to do next. Resident information is always up-to-date and available.

Keep Staff Informed

Keep staff up to date with what is going on in the facility and with residents without going back to a desktop.

For approved staff, the unified to do list also includes all ADLs and medications on the schedule.

Easily notify nurses of a resident's change in condition through alerting.

Spend More Quality Time with Residents

Running on any Apple iOS devices or Google Android devices, Companion guides caregivers to complete a full range of tasks accurately, efficiently, and on schedule, increasing resident satisfaction with the service they are receiving.

Documentation of ADLs can be completed in 30 seconds or less for services rendered at the point of care. Now caregivers can spend more time interacting with residents and less time documenting tasks.
