

Solution Sheet

Value Based Care for ACOs

Improve performance with real-time insights to support high-quality, coordinated care for managed populations.

Value Based Care for ACOs allows care managers to track acute and post-acute encounters for their attributed patient populations in real-time, surface high risk patients, and share care insights with broader care teams leading to more effective and efficient care coordination and collaboration.

Coordinate care for managed populations using real-time data and insights.

Risk-bearing providers are accountable for ensuring high quality, cost-appropriate care for their defined population of patients. However, lack of visibility and inefficient ways of retrieving accurate, complete, and timely patient encounter information results in delayed care, duplicative services and costs, and can result in unwanted outcomes.

This lack of real-time data can not only affect quality of care and patient outcomes, but can also impact quality measures and alignment with value based care programs.

How does Value Based Care for ACOs help?

Provides real-time data from across the continuum for improved visibility into patient movement, status, and risk.

Proprietary risk model powers alerts to highlight patients requiring attention.

Alleviates time-consuming phone and fax follow up for patient data, by including the latest clinical documents from the most recent point of care.

Supports care coordination during and after a transition of care.

Sharing patient information and care insights with the broader care team.

Proactively manage high risk patients during transitions.

Offers timely data and insights to support workflows tied to quality measure performance.

Value Based Care for ACOs, offers a single system to track and manage patients as they move to other care settings. Providing care managers with patient encounter information in real-time, the ability to highlight and focus on high-risk patients and share care plans with broader care teams, directly supporting their program strategies for value-based payment arrangements.

What you can expect with Value Based Care for ACOs

Track and manage high-risk patient populations across transitions of care

Maintain oversight of your patient populations after they leave the hospital with real-time encounter data, patient history, clinical documents, and care insights at your fingertips. Notifications include inpatient, observation, emergency department, and post-acute encounters, with emphasis on patients with a high readmission risk.

Coordinate care beyond your care team

Proactively support care coordination for your patients in other care settings with access to the latest hospital encounters, diagnoses, medications, test results, and care insights to ensure proper, timely and informed follow up care. By sharing patient and risk information with other providers, the patient's care team can better prioritize, collaborate, and intervene to address changing patient needs.

Optimize care, performance, and outcomes

Improve care transitions through greater efficiency, timely access to clinical documentation and proactive collaboration. Maximize care management programs for higher risk patient groups. Reduce unnecessary utilization and readmissions, and drive improvements to quality and performance outcomes.
