Solution Sheet

Hospitals and Health Systems

What kind of outcomes could you deliver with better insights?

Immediate, point of care access to deep, real-time insights at every stage of the patient's journey.

Hospitals and their care teams know that accessing the right information at the right time, results in high-quality care delivery and better outcomes.

Whether you're responsible for a patient in the emergency department (ED), a post-acute setting, or simply improving care transition at the time of discharge, PointClickCare's comprehensive care collaboration solutions supports:

- Improved visibility into patient health encounters.

- Automated clinical data exchange across the care continuum.

- Real-time insights for timely interventions from the ED through post-discharge.

- Data to support proactive patient monitoring

- Enhanced quality performance.

- Reduction in unnecessary admissions and readmissions.

North America's Largest Care Collaboration Network

We power the largest collection of acute and post-acute insights in the United States. Our solutions span the care continuum including post-acute settings, with 95% of hospitals in the United States discharging patients to skilled nursing facilities in our network. By joining our network, your hospital or health system gains access to comprehensive data for optimized care and collaboration.

> PAC Network Management facilitates the seamless, automatic flow of patient data between our acute and post-acute care institutions. When a patient is transferred from the hospital to a skilled nursing facility, their data is sent with them. This continuity makes processes more efficient for our staff and offers accurate information to help families make the best care transition decisions for their loved ones, through a single, secure platform.

Lori Baker
Director I Tri-Health

PointClickCare's Hospital and Health System Solutions include:

Emergency Department Optimization

Point of care insights for emergency department (ED) staff drive more informed care. With automation that integrates into existing care workflows, hospitals and health systems can fill gaps in patient history, empower care providers, and reduce unnecessary overutilization of ED resources. This enhances care management, reinforces safety for patients and staff, and improves efficiency and financial performance.

Intelligent Transitions

Hospitals connected to our platform can access accurate insights with real-time visibility to easily track patients from ED to inpatient and post-discharge. Timely care coordination helps case managers improve transitions of care by collaborating more effectively with teams across the care continuum. Our data and intelligent tools enable insights that help you to identify and manage high-risk patients, coordinate care across settings, and optimize care, performance, and outcomes.

PAC Network Management

Connecting hospitals and health systems with post-acute partners facilitates seamless transitions of care and better post-discharge outcomes. Hospital care managers can proactively monitor patients, improve post-acute transitions, promote better patient outcomes, and work more collaboratively with post-acute partners to develop and maintain a high-performing network. Care managers gain valuable insights into care delivered within the largest network of skilled nursing facilities, improving adherence to quality measures and reducing readmission rates.
