

Advancing Care Together

What We Do

As the market and technology leader in senior care coordination, our investments in innovation, network expansion and value-based care have expanded our focus to promote collaboration across all settings to close gaps in care, especially for high-needs, high-risk patients.

We now offer the largest connected care network in North America powered by real-time clinical insights, that can improve collaboration and care delivery from the hospital Emergency Department to post-acute and other key care settings along the patient journey.

Who We Serve

In addition to our dedicated support for skilled nursing and senior living constituents, we serve stakeholders across the care continuum including hospitals and health systems, ACOs and other risk bearing providers, as well as all U.S. health plans. We also partner with government entities, health information exchanges, state hospital associations, and other community-based programs to support their efforts to improve collaboration and consistency of care at the regional level.
