

Solution Sheet

Network-Based Care Coordination

Improve Health Outcomes for Aging Populations With a Comprehensive Network of Data and Insights

Our network encompasses a wide range of care teams including providers, hospitals, ambulatory facilities, and skilled nursing facilities, as well as health plans, and state agencies. This allows for real-time data exchange and care collaboration from multiple care sites. By fostering meaningful collaboration, our network facilitates improvements in both clinical outcomes and financial performance.

The PointClickCare Network provides real-time data from sites of care across the continuum.

Connectivity beyond existing network and state boundaries

Access to: 2,800+ hospitals and health systems, 3,600+ ambulatory clinics, 27,000+ senior care facilities, 200+ ACOs, 70+ state and government agencies, and 180+ health plans.

Real-time insights across every stage of the patient journey

With patient-centric clinical data across the care continuum and beyond your EHR, member network, region, or state, our solutions offer immediate point of care access to deep, real-time insights at every stage of the patient journey.

Expansive, full-continuum care collaboration network

By enabling seamless collaboration with broader care teams and unmatched visibility into post-acute settings, all stakeholders benefit from improved efficiency, transitions of care, and outcomes.

Improving Care for Aging Populations

Our network brings real-time data and deep insights to improve care for aging populations

With access to actionable insights, via PointClickCare's network, providers and care coordinators managing Medicaid, dual-eligible, and statewide patient populations can reduce costs, advance care quality, and drive improvement initiatives, particularly for high-touch populations with chronic conditions.

Better Communication and Efficiency

It can be inefficient and time consuming for staff to reach out to SNF partners for visibility into discharge plans and patient status. Making SNF data available in hospitals allows staff to manage and follow patients as they transition in and out of SNFs.

Improved Collaboration and Clinical Outcomes

PointClickCare solutions, powered by our national network, provide insights that help improve patient oversight and collaboration with SNF partners, driving better clinical outcomes.

Expedited Access to Patient Information Saves Time

Care team members have immediate access to patient status and discharge information. Phone calls and faxes to SNF partners are reduced, and SNF partner relationships can improve.

Our clinical outcomes have improved just by knowing a patient is discharged in real-time... if we know they went home, we can quickly call them and prevent a possible readmission or even an ED visit, which is a huge savings for our company
