ED Optimization: DxF Acute ADT

PointClickCare provides trusted ADT intermediary services for hospitals and health systems in California, ensuring seamless and compliant ADT data transfer and promoting care collaboration and coordination across care settings and the state.

Seamless, DxF-Compliant Data Exchange

Since 2018, hospitals and health systems using PointClickCare's ED Optimization solution have been seamlessly exchanging data for 32 million Californians. Delivering real-time data at the point of care has been our cornerstone.

Now, customers can leverage that data exchange with PointClickCare's **DxF Acute ADT**, which provides intermediary services to help health systems comply with the California Data Exchange Framework (DxF) without the need to integrate with other vendors or QHIOS.

Like other intermediaries in California, PointClickCare not only supports the required ADT data exchange elements of DxF, but our Care Collaboration Network already includes over 180 hospitals, 220 ambulatory clinics, and 1000 skilled nursing facilities.

This complementary capability is offered upon request and at no additional cost.

How Can Dxf Acute ADT Help?

Compliance with California DxF through existing connectivity

Share ADT data quickly, securely and appropriately with providers statewide

Quickly triage and treat complex patients in your ED with immediate, real-time insights

Support safe, effective, whole-person care for patients across California

Simple to request via your PointClickCare account team
