

Unlock Millions in Savings with Smarter, Proactive Post-Acute Care Management

Skilled Nursing Facility

What are readmissions really costing your plan?

Let's imagine your health plan supports **7,500** SNF encounters per year

With a 20% readmission rate, that's **1,500** readmissions per year

The average cost per readmission **\$15,100**

Now imagine this story repeated across your plan.
That's an annual readmission cost of **\$22.65 million**

*Guidehouse (2025), "Improving Episode-Based Performance and Preparing for CMS TEAM" — \$15,100 average cost per readmission across U.S. Census Divisions.

What if you could **prevent** even a fraction of those readmissions with real-time visibility into post-acute care?

Two Possible Care Journeys:

How much could your plan save if you turned reactive care into proactive care?

Reactive Care

- Missed warning signs
- Readmission at \$15,100 per case
- Longer stays, higher costs
- Millions in avoidable cost readmissions

Proactive Care

- Predictive alerts catch risks early
- Care team intervenes before crisis strikes
- Members return home sooner, safer
- Better outcomes lift Quality scores (HEDIS®, Stars) — generating more dollars to reinvest in member programs, clinical resources, and continuous improvement.

Traditional SNF notifications (ADT) are not enough. PointClickCare's PAC Management for Health Plans delivers:

Real-time SNF visibility (admissions, discharges, vitals, therapy notes)

Predictive Readmission Risk (pRTH) to flag high-risk members early

Proactive discharge planning to avoid care gaps

The result? Members spend less time in facilities, avoid unnecessary hospitalizations, and return home sooner
