The Same Discharge. Two Very Different Outcomes.

Care management & population health leaders: Patients discharge from SNFs every day.
Do you have visibility into what's happening before they leave?

The Challenges

The discharge plan is in the chart, but buried across unstructured SNF documentation (notes, forms, faxes). And the riskiest moment isn't the SNF stay. It's going home, when a missing med, follow-up, or DME becomes a setback.

When gaps stay hidden, the outcomes are predictable:

The Solution

Act before the transition happens—not after it fails.

From Flying Blind

Your EHR

Loads of Cases

Your team struggles to stay on top of each patient chart.

To Flying Colors

+ PAC Management IQ

Caseloads Managed

Get a clearer view across your caseload—who's approaching discharge, where plans look incomplete, and where to focus first.

From Flying Blind

Your EHR

Discharged

Your patient is discharging tomorrow from a SNF. But you have no idea.

To Flying Colors

+ PAC Management IQ

In Charge

SNF-level discharge planning so you can identify gaps and coordinate follow-up care before the patient comes home, not after.

From Flying Blind

Your EHR

Bouncebacks
Back to the hospital.

Problems build during the SNF stay—and by the time you learn what went wrong, the patient is readmitted.

To Flying Colors

+ PAC Management IQ

Bouncing back
Home—and staying home.

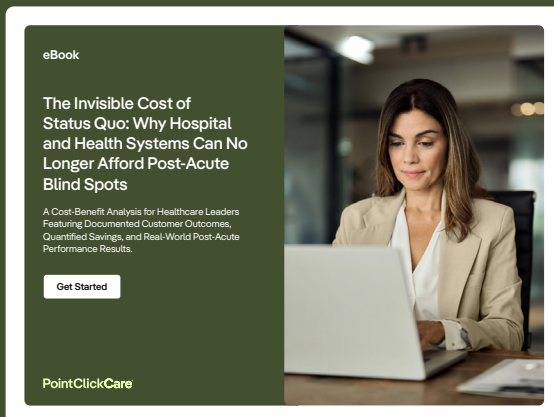

By surfacing discharge gaps in real time, PAC Management IQ helps your team intervene before the transition fails.

How it Works

AI organizes what's buried in SNF documentation into a clear discharge view—so your team can act before discharge, not after it fails.

The Results

Explore documented outcomes from leading healthcare organizations using **PAC Management IQ**
